                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1998-03-09 Sequence 14, Application US/09041886

Patent No. 6238972

GENERAL INFORMATION:

APPLICANT: Bredesen, Dale E.

APPLICANT: Rabizadeh, Sharroz

TITLE OF INVENTION: Proapoptotic Peptides, Dependence

TITLE OF INVENTION: Polypeptides and Methods of Use

UNMBER OF ENQUENCES: 72

CORRESPONDENCE ADDRESS:

ADDRESSE: Campbell & Flores LLP

STREET: 4370 La Jolla Village Drive, Suite 700

CITY: San Diego

STATE: Callifornia

COUNTRY: United States

IP: 92122

COMPUTER: Floppy disk

COMPUTER: REDABLE FORM:

MEDIUM TYPE: Floppy disk

Sequence 1, Application US/08545528D

Patent No. 6537773

GENERAL INFORMATION:

APPLICANT: Fraser et al.

TILLE OF INVENTION: Nuclectide Sequence of the Mycoplasma Genitalium Genome, Fragment

Patent No. 6537773

TILLE OF INVENTION: Thereof, and Uses Thereof

PILE REFERENCE: P8193P1

CURRENT APPLICATION NUMBER: US/08/545,528D

CURRENT FILING DATE: 1995-10-19

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

US-09-621-976-91/c
Sequence 91, Application US/09621976
Patent No. 663963
GENERAL INFORMATION:
APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Glordano, J.Y.
TITLE OF INVENTION: ESTS and Encoded Human Proteins.
TITLE REFERENCE: GENSET.054PR2
CURRENT APPLICATION NUMBER: US/09/621,976
CURRENT FILING DATE: 2000-07-21
NUMBER OF SEQ ID NOS: 19335
SOFTWARE: Patent.pm
SEQ ID NO 91
LENGTH: 570
TYPE: DNA
ORGANISM: Homo sapiens
Hey, Patricia
Kawaguchi, Yoshihiko
Merriman, Tony R
Metzker, Michael L
TITLE OF INVENTION: No. 6555654el LDL-Receptor
NUMBER OF SEQUENCES: 455
CORRESPONDENCES: 455

Patent No. 6682886

GENERAL INFORMATION:

APPLICANT: Incirag, Jeanne F.

APPLICANT: Incirag, Jeanne F.

APPLICANT: Edwards, Carla M.

TITLE OF INVENTION: GENES EXPRESSED IN ALZHEIMER'S DISEASE;
FILE REFERENCE: PA-0024 US

CURRENT APPLICATION WUMBER: US/09/566,921

CURRENT APPLICATION WUMBER: US/09/566,921

CURRENT FILING DATE: 2000-05-05

NUMBER OF SEQ ID NOS: 138

SOFTWARE: PERL PROGRAM

SEQ ID NO 136

LENGTH: 841
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5.4%; Score 25; DB 4; Length 575;

Sequence 2968, Application US/09621976

Patent No. 6639063

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: JODERT, S.

APPLICANT: Glordano, J.Y.

TITLE OF INFORTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENSET.054PR2

CURRENT APPLICATION INVIERE: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

Sequence 7, Application US/08261822A
Patent No. S650553
GENERAL INFORMATION:
APPLICANT: Ecker, Joseph R. et al.
TITLE OF INVENTION: Plant Genes for Sensitivity to Ethylene
TITLE OF INVENTION: and Pathogens
NUMBER OF SEQUENCES: 82
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock, Washburn, Kurtz, Mackiewicz & No. 5650553ris
STREET: One Liberty Place, 46th floor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                        Sequence 13, Application US/09675305

Sequence 13, Application US/09675305

Patent No. 644153

GENERAL INFORMATION:

APPLICANT: Donobo, Gregory

APPLICANT: Turner, C. Alexander Jr.

APPLICANT: Triedrich, Glenn

APPLICANT: Friedrich, Glenn

APPLICANT: Sands, Arthur T.

TITLE OF INVENTION: No. 6441153el Human Carboxypeptidases and

TITLE OF INVENTION: Polynucleotides Encoding the Same

FILE REFERENCE: LEX-0047-USA

CURRENT APPLICATION NUMBER: US/09/675,305

CURRENT APPLICATION NUMBER: US 60/156,685

PRIOR FILING DATE: 1999-09-29

Patent No. 5695933

GENERAL INFORMATION:
APPLICANT: Schalling, Martin
APPLICANT: Housman, Thomas J.
APPLICANT: Housman, David E.
TITLE OF INVENTION: Direct Determination of Expanded
TITLE OF INVENTION: Nucleotide Repeats in the Human Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       5.1%; Score 24; DB 1; Length 30; 100.0%; Pred. Patent No. 5741645
GENERAL INPORMATION:
APPLICANT: Ranum, Laura P.W.
APPLICANT: Cound, Ming-Yi
APPLICANT: Zoghbi, Huda Y.
TITLE OF INVENTION: Gene Sequence for Spinocerebellar Ataxia
Patent No. 5741645
ITLIE OF INVENTION: Type I and Method for Diagnosis
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ; OTHER INFORMATION: Description of Artificial Sequence: Probe US-09-043-303-17

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 4, Application US/08267803B
Patent No. 5834183
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Ranum, Laura P.W.
APPLICANT: Chung, Ming-yi
APPLICANT: Chung, Ming-yi
TITLE OF INVENTION: Gene Sequence for Spinocerebellar Ataxia
TITLE OF INVENTION: Type 1 and Method for Diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                5.1%; Score 24; DB 2; Length 168; 100.0%; Pred. Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone amen. Note that the variation annotation may not be found in the sequence submission only a small overlap as described above.

Corresponding to the overlapping clone, as we submit sequences with This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw., SWISSROT; Tr., TREMBL; Wp., WORMPEP information on the WORMPEP database can be found at thrp://www.sanger.ac.uk/Projects/C elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Futher://www.sanger.ac.uk/HGP/ChrxX RP3-4547 is from the library RPCI-3 constructed by the group of http://www.chori.org/bacpac/home.htm
